Tasks

Create Datascraper for an e-Commerce Website

Generate Item Descriptions Relevant to Current Market Trends

User Stories

As an AI developer I would like a tool that allows me to easily scrape useful data about items from e-commerce websites. This way I can spend more time worrying about how to train my model instead of trying to find data.

As someone interested in reselling my items, I want a feature that automatically fills in the details needed to capture a buyers attention so I don't to spend tons of time doing that myself.

As a market analyst I would like a tool that allows me to easily scrape statistical data and meta data about items. This way I can focus more time and energy on analyzing the data, as well as generally have more data to work with.

As someone interested in reselling my items, I want my listing to quickly and effectively capture buyers' attention so that my items sell quickly from the time I post them.

As someone new to reselling items I would like to see some ideas about how to market my items. This way I don't have to spend too much time brainstorming or have to bother someone else for an opinion.

As an artist/entrepreneur I would like a tool that can help me generate ideas for how to market my product (reccomend price, description, etc.) so that my business can be more successful.

To3

Abstract API Classes

As someone interested in reselling my items, I want to post my items on as many different e-commerce sites as possible so that my items sell quickly from the time I post them.

As a developer (especially one new to this programs code) I would like to be able to easily integrate this program with another e-commerce API, if say a new one comes out in the future.
